

#### MACCAFERRI

## Daily trasmission of critical data?

WHERE are the protection systems located?

Have the protection systems been **IMPACTED**?

## What it is

**HELLOMAC** is the alert system for safeguarding lives, infrastructures and buildings protected by any kind of barriers.

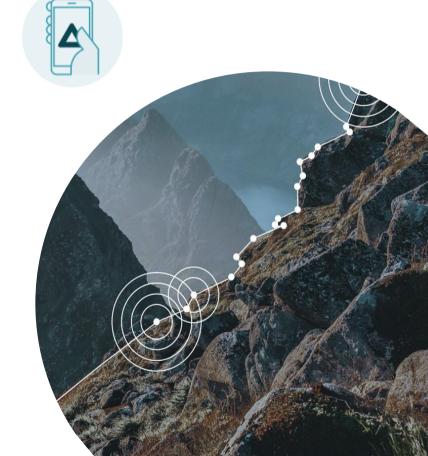

## What it does

**HELLOMAC** alerts people in time. Whatever is the barrier to monitor.

The alarm is immediately send via app, email or sms on computer and smartphone.

The device permits also to activate local sirens and lights

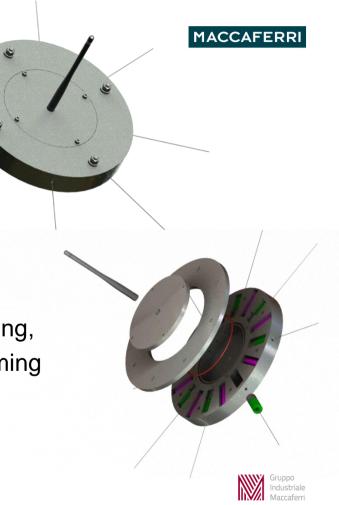

### How it's made

**HELLOMAC** Is a compact and robust device, made with a special metal alloy, chosen to withstand considerable forces.

It's able to detect events (boulders, stresses, sagging, etc.). In each single rockfall protection module, coming also from different directions (up to 8).

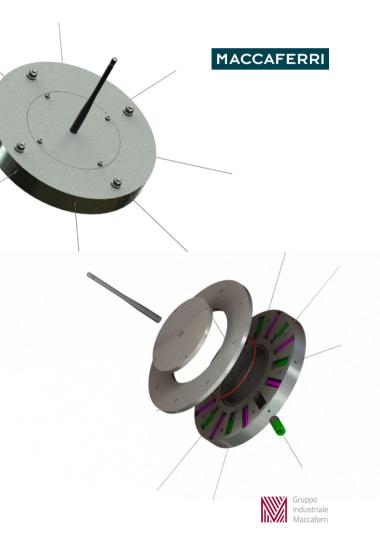

## How it's made

No external power supply - batteries only

■ No need for configuration or activation

■ No special technician for installation

Mo maintenance
Mo m

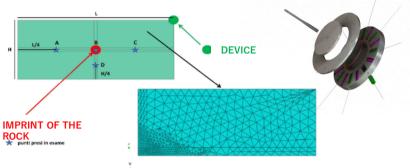

## How it's installed

areas of the barrier to detect different points

HELLOMAC has been tested at Politecnico di Milano and specifically calibrated on Maccaferri Product.

Impat simultation as SEL level were conducted

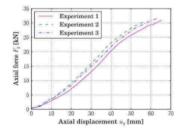

Fig. 6. Plot of the experimental results after [8].

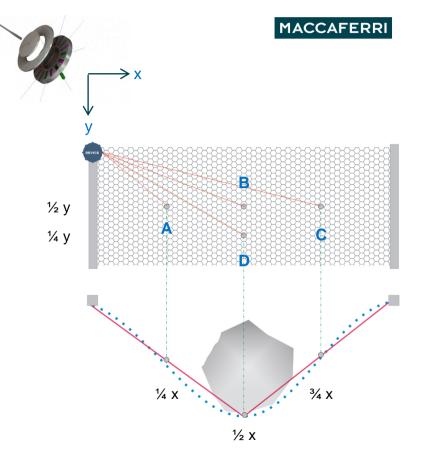

## How it's installed

- According to the model of barrier
- Possibility of retrofitting on existing barriers

Model: Kit RB 1500 (10m x 4m)						
Position	slack of the tie rod [m]	Length without slack [m]	Total length [m]			
Α	1.26	3.20	4.46			
В	1.93	5.38	7.31			
С	0.39	7.76	8.15			
D	0.78	5.83	6.61			

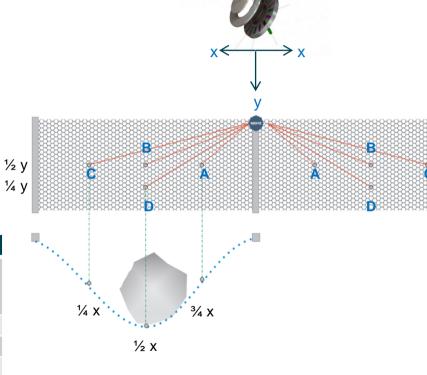

#### MACCAFERRI

# How it's installed

■ According to the model of barrier

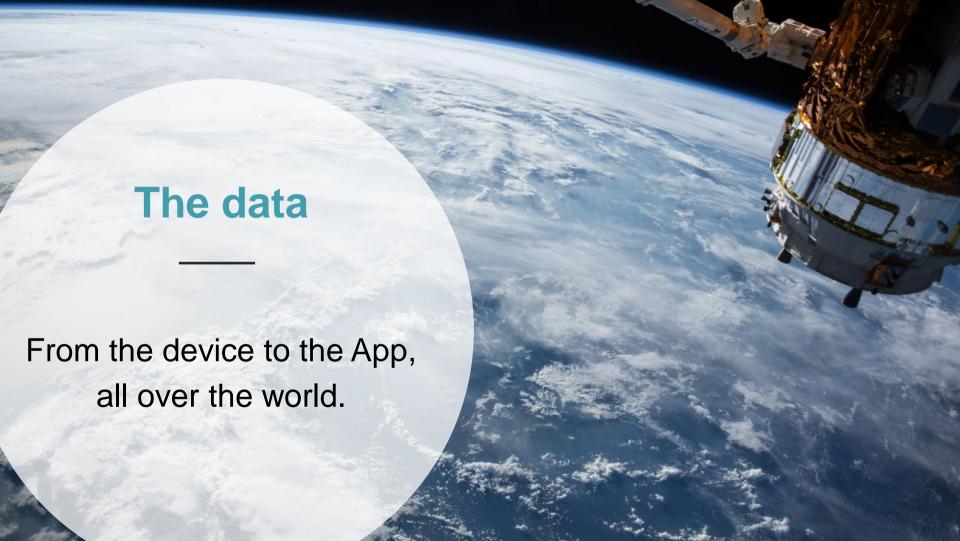

Model: Kit RB 1500 (10m x 4m)							
Position	slack of the tie rod [m]	Length without slack [m]	Total length [m]				
Α	1.26	3.20	4.46				
В	1.93	5.38	7.31				
С	0.39	7.76	8.15				
D	0.78	5.83	6.61				

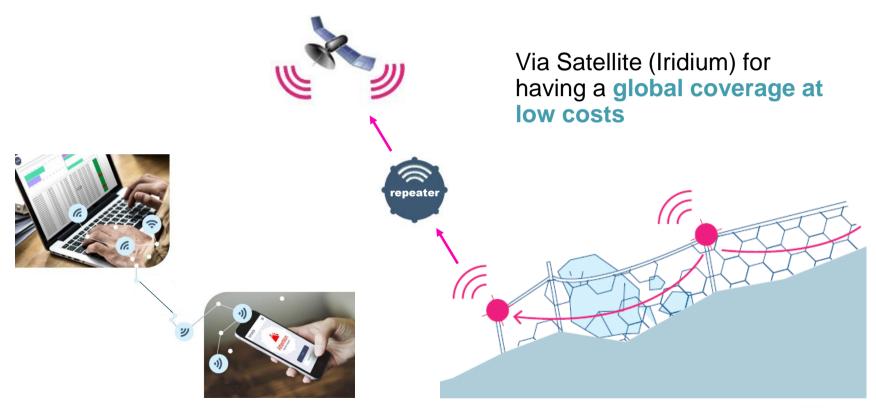

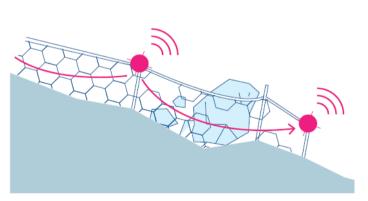

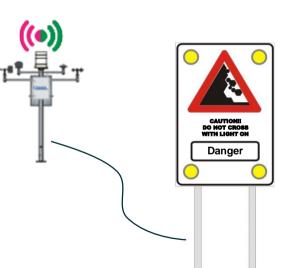

- Local alarms and commands
- via Satellite (Iridium)
- via GSM (option with datalogger)
- other sensors available

#### **HELLOMAC APP**

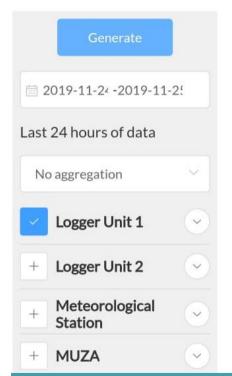

Geolocalization, alerts, notifications, data: all the information you need, are in your hands.

#### **HELLOMAC APP**

#### Let's go deep...

#### **HELLOMAC APP**

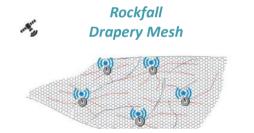

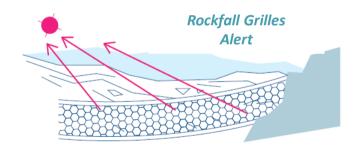

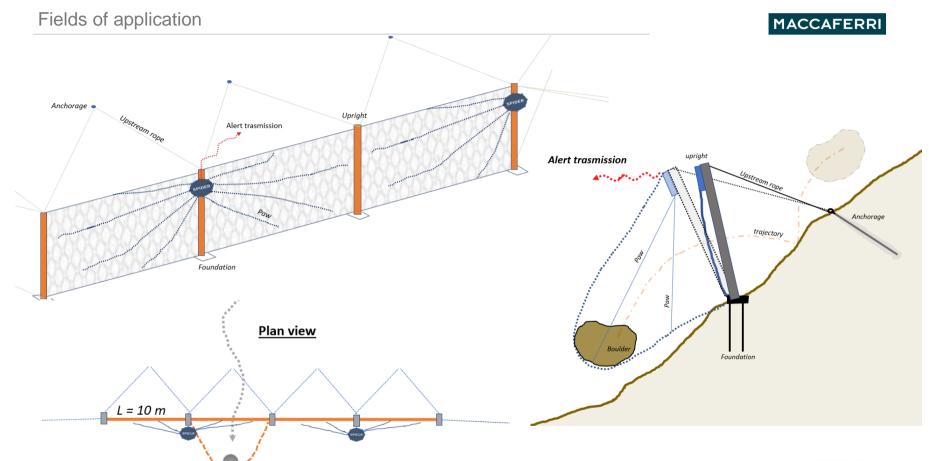

- M The system is designed to operate in environments with high impact energy and aggressive climatic conditions. ■
- M Rain, snow, wind and sun are not a problem.
- There are no electric connection wires and or weak points of breaking.

# It's smart!

Not a big amount of data, only when and where needed

# It's safe!

In line with the recommendation of UNI 11211-5 (May 2019) and the UNI 11211-2 (June 2007) norms

- · HELLOMAC weight is approx. 8 kg
- It can be carried to remote places due to small dimensions and lightness
- It can be easily fixed to the barrier post by no skilled worker required

### MAINTENANCE FRFF

 HELLOMAC has 8 batteries with an estimated span life of 5 years making unnecessary any annual maintenance (each device daily communicates his status and battery level).

- Daily transmission of location and rockfall protection status. Simplicity avoids data transmission issues.
- Tested against impacts (resists up to 16G acceleration)
- It works between -40°C and +60°C
- It was specifically tested on Maccaferri rockfall barriers by Politecnico di Milano
